# Binarizar por lindar fija

```
im = imread("airplane.tif");
figure,imshow(im),title("imagen originar")

aux = ones(512);
lindarMax = 50;
lindar = 70;
aux(im<lindarMax) =0;
aux(im>lindar) =1;
figure,imshow(aux),title("imagen binarizado")
```

# Binarización por otsu

```
th = graythresh(im);
bw = im2bw(im,th);
figure,imshow(bw),title("Binarización por otsu")
```

# Ejecicio, binarizar el imagen

```
im = imread("textsheet.jpg");
figure,imshow(im),title("imagen originar")
% Definir un filtro de media
kernel = ones(9)/9/9;
promig = imfilter(im, kernel, "conv", "replicate");
k = 23;
llindar = promig -k;
res = im > llindar;
figure,imshow(res),title("imagen res")
```

# imagen originar Virginia Tech Southern Cal Rensselaer Colorado State Case Western Texas A&M Iowa Michigan State Ohio State

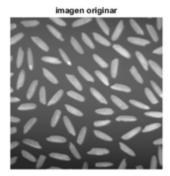

imagen res

Virginia Tech
Southern Cal
Renssolaer
Colorado State
Case Western
Texas A&M
lowa
Michigan State
Ohlo State

## **Obtener arros**

```
im = imread("arros.tif");
figure,imshow(im),title("imagen originar")

th = graythresh(im);
bw = im2bw(im,th);
figure,imshow(bw),title("Binarización por otsu")
```

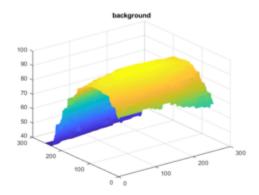

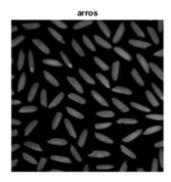

1

Obtener fondo, utilizar open para quitar las pequeñas estructuras blancas

```
%(arroz)
ee = strel("disk",20);
fons = imopen(im,ee);
figure,imshow(fons),title("Background")
figure,mesh(fons),title('background')
arros = imsubtract(im,fons);
figure,imshow(arros),title("arros")
```

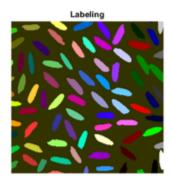

utilizar otsu para encontrar el optimo

```
th = graythresh(arros);
bw = im2bw(arros,th);
figure,imshow(bw),title("Top hat binarizado")
```

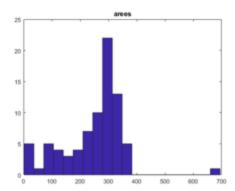

Genera imagen etiquetada de conectividad 4

```
eti = bwlabel(bw,4);
figure,imshow(eti,[]),title("Labeling"),colormap colorcube
```

#### 4

```
% obtener carecteristicas geometricas
dades = regionprops(eti,'all');
area50 = dades(50).Area;
arees = [dades.Area];
figure,hist(arees,20),title('arees')
```

#### % buscar irregularidades

```
area_max = max(arees);
ganso = find(arees==695);
bw3=(eti==68);
figure,imshow(bw3),title('arros ganso')
```

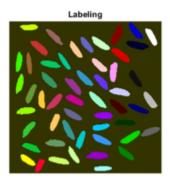

#### 6

```
% eliminar bordes
mark = eti;
mark(2:end-1,2:end-1) = 0;
rec = imreconstruct(mark,eti);
res = imsubtract(eti,rec);
figure,imshow(res),title("Eliminación de bordes arroz")
```

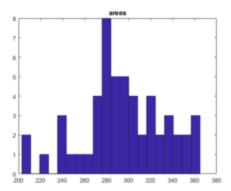

```
% resultado final
eti2 = bwlabel(res,4);
figure,imshow(eti2,[]),title("Labeling"),colormap colorcube
```

#### 8

```
% graficas

dades = regionprops(eti2,'all');
area50 = dades(50).Area;
arees = [dades.Area];
figure,hist(arees,20),title('arees')
```
